Impressive LLOX Algoa #1 & #2 Production Facilities

LLOX LLC, the subsidiary to LLOG Exploration, was formed in 2014 to continue their onshore and shallow water exploration of Louisiana and Texas Gulf Coast oil and natural gas resources.

LLOG Exploration was formed in 1977 and has since grown to become the #1 privately held oil producer in the United States. They currently produce over 50,000,000 BOE annually and boast a very compelling 70% success rate in deep water exploration and development in the Gulf of Mexico.

Since inception, LLOX LLC has successfully hit 25 out of 35 wells in Texas and Louisiana giving them a 71.4% success rate in their onshore and intercoastal wells. Their current production is nothing short of staggering with daily production of 19 MMCFGD & 2000 BOPD and cumulative production over 8.6 BCFG & 967 MBO in Louisiana alone.

Already this year, LLOX made two major onshore discoveries, Algoa 1 & 2, with estimated production reserves of **30 BCFG & .25 MMBO**. These two wells are currently producing a combined rate of **25 MMCFPD and 900 BOPD**.

Energy Partners Fund participated in all four of the successful 2018 Bodacious wells that were drilled in Saint Charles Parrish, LA: we logged 104' of pay in the Bodacious #3 well, as well as 30' of pay in the Bodacious #1A, 49' in Bodacious #4, and 41' of net linear pay in the Bodacious #4A.

Bodacious #3

Drilled in the Boute Field of St. Charles Parish, Louisiana in February 2018 well was drilled to a total depth of 14,221' in approximately 10 days.

The well logged an estimated 104' section in the CIP OP sand from 13,776' to 13,880'. As of July 2018, the well continues to flow to sales at 4,691 MCFGD & 50 BOPD and has cumulatively produced over 374 MMCF & 4,352 BO since May 2018.

Bodacious #1A

Drilled in the Boute Field of St. Charles Parish, LA as an offset to the Bodacious#3 in March 2018 to a total depth of 12,729' in under 10 days. Our 2nd successful well of the year logged an estimated 30' productive section in the CIP OP sand. The well was brought to sales on 21-July averaging 3,539mcf/g & 34.7 bbls condensate per day.

Bodacious #4

Drilled in the Boute Field of St. Charles Parish, Louisiana in April 2018 to a total depth of 12,510' our 3rd successful well in the area, logged an estimated 49' productive section in the CIP OP sand. The well currently awaits production.

Projected Payback = 23 months | 5-YR Yield = 258% |
5-YR Cum. = 5.75 BCF + 144m bbls

Bodacious #4A

Drilled as an offset well to the Bodacious #4 using the same rig, the Bodacious #4A was drilled successfully to a total depth of 13,853' in the Boute Field of St. Charles Parish, Louisiana in May 2018. Our 4th successful well in this Field, logged an estimated 70' productive section in the CIP OP sand. The well currently awaits production and may even be better than Bodacious#4.
